

# Self-Organizing map and anorectic data set

By: Theresa Helm

# Overview

- Problem Description
- Anorectic Data Set
- Self-Organizing Map
- Implementation
- Results
- Conclusion
- Summary

# Problem

- Using a mathematical algorithm to support medical research

# Anorectic Data Set

- Sanitized Data Set

	Name	Label
1	weight	Body Weight
2	mens	Menstruation
3	fast	Restriction of food intake (fasting)
4	binge	Binge eating
5	vomit	Vomiting
6	purge	Purging
7	hyper	Hyperactivity
8	fami	Family relations
9	eman	Emancipation from family
10	frie	Friends
11	school	School/employment record
12	satt	Sexual attitude
13	sbeh	Sexual behavior
14	mood	Mental state (mood)
15	preo	Preoccupation with food and weight
16	body	Body perception
17	time	Time of interview
18	diag	Patient Diagnosis
19	tidi	Time/diagnosis interaction
20	number	Patient Number
21	diag2	Diagnosis
22	time2	

# Self-Organizing Map (SOM)

- Artificial neural network
- Unsupervised learning
- Used for visualizing low-dimensional views of high-dimensional data

# SOM continued

- ◉ Has two modes: training and mapping
- ◉ Consists of nodes

# How SOM works

- Randomly initialized
- Receives the input vector
- Uses Euclidean Distance

$$\sqrt{(p_1 - q_1)^2 + (p_2 - q_2)^2 + \dots + (p_n - q_n)^2} = \sqrt{\sum_{i=1}^n (p_i - q_i)^2}$$

# SOM Illustrated

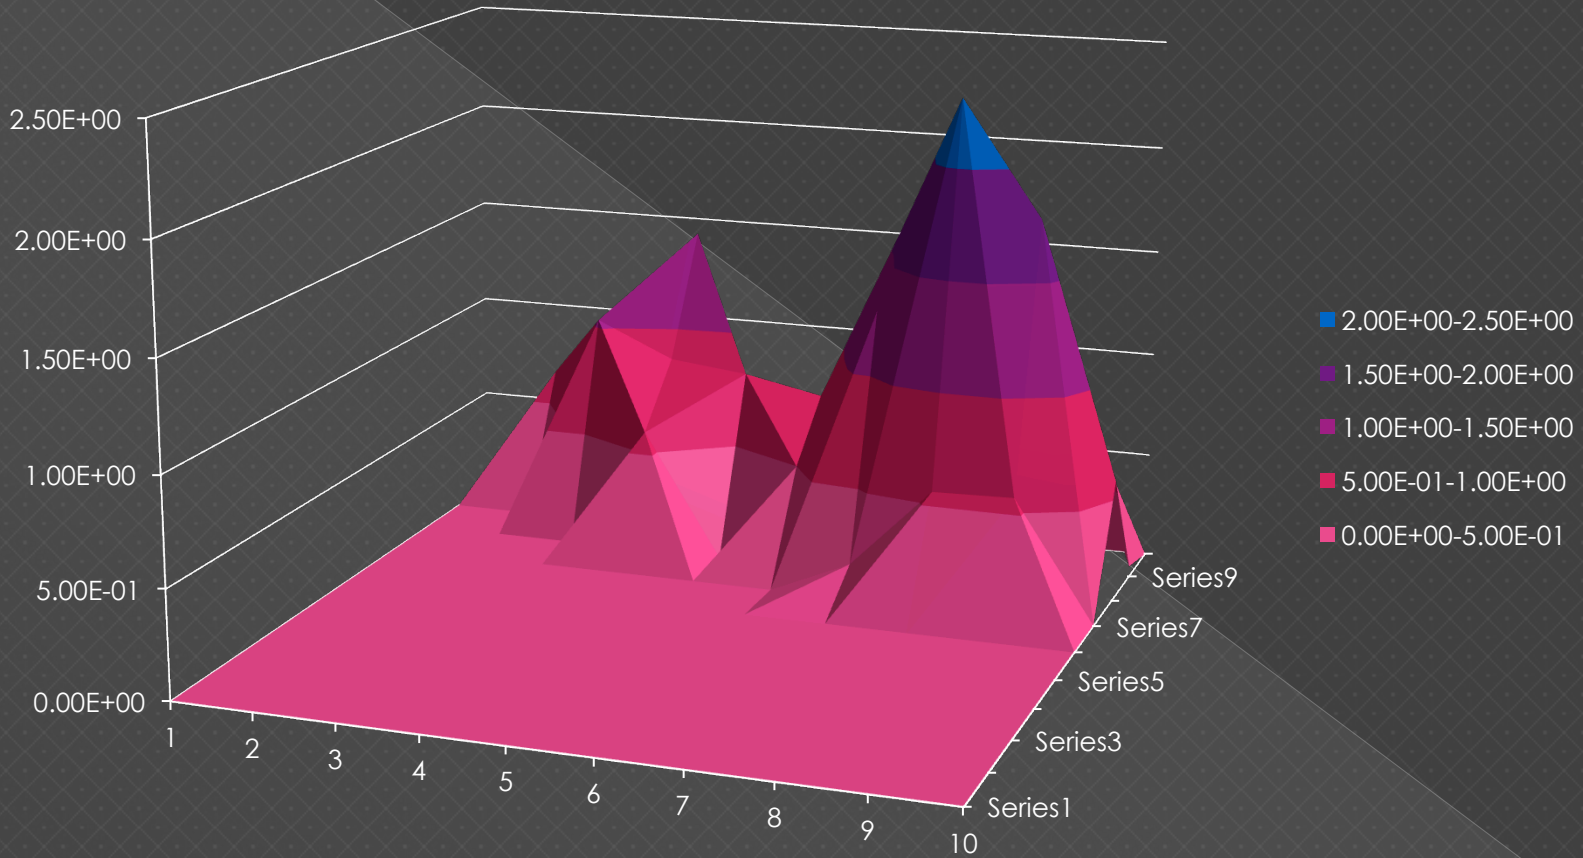

# Implementation

- Ran the original anorectic data set with SOM
- Made surface graphs of each attribute
- Found that the original data set is noisy

# Implementation

# Implementation

- Took out the noisy data

	Name	Label
1	weight	Body Weight
2	mens	Menstruation
3	fast	Restriction of food intake (fasting)
4	binge	Binge eating
5	vomit	Vomiting

4	4	3	2	1	1	1	1	1	1
4	4	3	2	1	1	1	1	1	1
4	4	3	2	1	1	1	1	1	1
4	4	3	1	1	1	2	1	1	1
4	3	2	1	1	1	2	1	1	1
4	4	3	2	1	1	1	1	1	1
4	4	4	3	3	2	2	1	2	2
4	4	4	4	3	3	2	2	2	3
4	4	4	4	4	4	3	3	3	2
4	4	4	4	4	4	4	3	2	2

← With 16 attributes

# Labeling of the Map

- ◉ Anorectic data set has no labels
  - > Anorectic
  - > Border
  - > Non-Anorectic
- ◉ Solution- Made my own labels

# Labeling of the Map

A=1  
B=2  
C=3  
D=4

# Conclusions

- ◉ Not an accurate way to determine if a person is anorectic
- ◉ Use different attributes
